

Del-Ware Faceted Bottoms...

Improve Microwaveability

Improve Wall Strength

Improve Stackability

Improve Durability

The Faceted Bottom Advantage

The structurally engineered faceted design of Del-Ware containers makes them the obvious choice. Here's why:

- Facets on the bottom of our containers means they stand up to the rigors of the Microwave better than other containers. This distinguishes Del-Ware as the preferred thermoformed container for microwaveable use.
- The facets increase the wall strength to hold up to more demanding applications.
- The interlocking faceted bottoms make stacking easier. This leads to easier storage and less overhead time spent fumbling around awkward containers.
- Improved microwaveability, wall strength, and stackability from faceted bottoms leads to a more durable and subsequently more re-usable container..
